#### [SDK] Red Apps settings available on Web

From now on, Red Apps written in TypeScript can be built with dedicated settings.

Settings can be stored using local storage of web browser or SDK API. When using second method, only storing limited amount of non-sensitive data is allowed, as the storage is not designed to store PCI/PIIrelated data.

Settings can be accessed from Settings menu that is available on Sabre Red Web for all users and shows up on Sabre Red 360 when user has TypeScript Red App with settings assigned.

There are no changes for settings of Java Red Apps. They are available only on Sabre Red 360 and accessible from Tools > Options > Red Apps Settings.

Documentation for these new features is available on SDK Developer Studio in section Web Red Apps > UI Contributions > Red Apps Settings.

*Note:* The API will be slightly modified in the next release. Please hold on with production development until that time.

#### [SDK] afterHotelModifyDetails extension point enhancement

Starting from this release workflow extension point dynamo.hotel.modify:afterHotelModifyDetails is triggered by modify hotel commands (HOM) as well as GUI interactions.
